

CLAUDE

ota-rollout-engine — CLAUDE.md

INHERITED FROM Helix Constitution

This module is a submodule of a project that includes the Helix Constitution submodule. All rules in `constitution/CLAUDE.md` and the `constitution/Constitution.md` it references apply unconditionally. Locate the constitution submodule from any arbitrary nested depth using its `find_constitution.sh` helper (it walks up parent directories and follows the git superproject pointer — no hardcoded depth).

Canonical reference: <https://github.com/HelixDevelopment/HelixConstitution>

Project-specific rules below extend the universal rules; they never weaken any universal clause. When this file disagrees with the constitution, the constitution wins.

Module overview

`ota-rollout-engine` is a reusable Helix OTA building brick, consumed by the `helix_ota` control plane and designed to be reusable by other projects. See `README` for its API, tests, and usage.
